Re: Site Inspection, SM/015/036, SM/015/038, Shirley Rose

On December 10, 1987 I inspected the above referenced sites. Shirley Rose is temporarily shutting down operations near the power substation (SM/015/036). There are several more small lined ponds at this site, but mining activity is limited. Surface disturbance is less than five acres.

The new site, SM/015/038, can be accessed by taking a dirt road east off the highway approximately two miles south of Woodside. The access road is .75 miles long and is unimproved. Two trailers have been set up and a wood frame building is going up. No mining has yet taken place here.
